perimeter	
area	
volume	
cubic units	
cuboid	
cube	
width	
length	
height	
rectangle	
rectilinear	
parallelogram	
triangle	

Area of a rectangle

$\text{length} \times \text{width} = \text{area of a rectangle}$

Counting squares:

$$\text{area} = 18\text{cm}^2$$

Use formula:

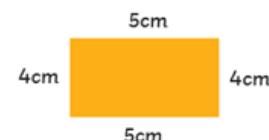

$$6\text{cm} \times 3\text{cm}$$

$$\text{area} = 18\text{cm}^2$$

$$8\text{cm} \times 4\text{cm} \quad \text{area} = 32\text{cm}^2$$

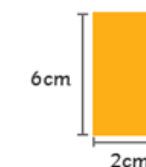

Perimeter of a rectangle

$\text{perimeter} = \text{length} + \text{width} + \text{length} + \text{width}$ or $(\text{length} + \text{width}) \times 2$

$$5\text{cm} + 4\text{cm} + 5\text{cm} + 4\text{cm}$$

$$\text{area} = 18\text{cm}^2$$

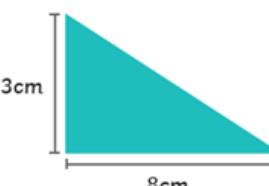

$$(6 + 2) \times 2$$

$$\text{area} = 16\text{cm}^2$$

Area of a triangle

$\text{base} \times \text{perpendicular height} \div 2 = \text{area of a triangle}$

$$8\text{cm} \times 3\text{cm} \div 2$$

$$\text{area} = 12\text{cm}^2$$

Area of a parallelogram

Perimeter, Area and Volume Year 6

Shapes with the same area can have different perimeters.

$$\text{area} = 8\text{cm}^2 \quad \text{perimeter} = 12\text{cm}$$

$$\text{area} = 8\text{cm}^2 \quad \text{perimeter} = 18\text{cm}$$

Shapes with the same perimeter can have different areas.

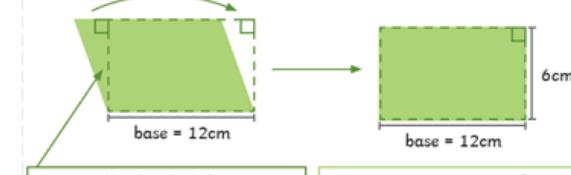

$$\text{area} = 8\text{cm}^2 \quad \text{perimeter} = 12\text{cm}$$

$$\text{area} = 5\text{cm}^2 \quad \text{perimeter} = 12\text{cm}$$

$\text{base} \times \text{perpendicular height} = \text{area of a parallelogram}$

A parallelogram can be transformed into a rectangle.

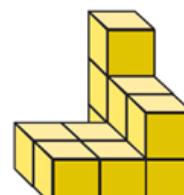

$$\text{perpendicular height} = 6\text{cm} \quad 12\text{cm} \times 6\text{cm} = 72\text{cm}^2$$

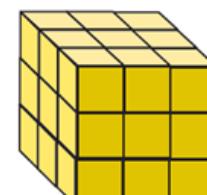

Volume- counting cubes

$$= 1\text{cm}^3$$

$$11\text{cm}^3$$

$$27\text{cm}^3$$

Volume of a cuboid

$\text{length} \times \text{width} \times \text{height} = \text{volume of a cuboid}$
